

The Problem:

Motorbike chains must not only be greased regularly but also cleaned in advance in order to minimise wear and tear. Kettenmax is a professional device that significantly facilitates chain cleaning. However, no chain cleaner especially adapted to the Kettenmax in order to obtain an optimal result, existed to date.

The Solution:

Product Advantages:

Intensive cleaner, especially developed for the Kettenmax

- Thorough and effective cleaning
- Integrated corrosion protection
- High efficiency, without drip-off loss
- Perfect dosing
- Fast drying
- O/X/Z-ring compatibility
- Not hazardous to surfaces
- Guaranteed acid-free

Applications:

For all highly-stressed, fast-running drive chains

How to apply:

Fill the chain cleaner into the dosing bottle of the Kettenmax and close with the dosing lock. Clean the chain according to the operating instructions provided with the Kettenmax. Return any chain cleaner residuals left after cleaning into the original bottle and close the latter. Do not store the chain cleaner in the Kettenmax dosing bottle for an extended time (the dosing cap is not tight, allowing cleaner vapour to escape from the bottle).

Note: Do not use the chain cleaner on a hot but rather on a completely cooled-down motorbike only. Grease with S100 White Chain Spray after cleaning.
